#### (57) ABSTRACT

Embodiments are described for handling focus when a gesture is input in a multi-screen device. In embodiments, a first image displayed on a first touch sensitive display of a first screen may be currently in focus. In embodiments, the gesture is a tap on a second touch sensitive display of the device. In response to the gesture, an application is launched, which displays a second image on a second display of a second screen. Focus is then changed from the first image on the first touch sensitive display to the second image on the second touch sensitive display.
